

iDISPLAY™ Touch Player

Interactive Digital Displays Built for Commercial Use

The iDISPLAY Touch Player with integrated Pulse Technology is an Android media player that can support touch-screen monitors and traditional digital signage networks. Solid-state, compact and light, this innovative player provides a wide range of interactive features to enhance consumer engagement. iDISPLAY Touch Player allows you to convert any size touch screen into a fully functional Android tablet*.

Play your media, content and applications on any screen size from any location in 1080p full HD. Connect remotely to update and track performance, capture data and create analytics.
